Outline

- About SciNet
- Using Niagara and Mist
- Data management and I/O tips

Mike Nolta (SciNet)

Introduction to SciNet, Niagara & Mist

June 14, 2023 3 / 47

SciNet is a centre for high-performance computing at the University of Toronto.

- We run massively parallel computers to meet the needs of researchers across Canada.
- 5 other HPC centres in Canada also provide academic Advanced Research Computing resources.
- These centres maintain and support a network of resources available to researchers across Canada, under a national allocation system administered by the **Digital Research Alliance of Canada**.

 - Narval (Montréal, Québec)

- One large parallel cpu cluster:
 - Niagara (University of Toronto)
- One homogeneous gpu cluster:
 - Mist (University of Toronto)
- Several cloud systems (Sherbrooke, Victoria, Waterloo).

What does SciNet do?

Systems

We host one of the largest supercomputers in Canada available to academics.

• Niagara CPU cluster

What does SciNet do?

Systems

We host one of the largest supercomputers in Canada available to academics.

• Niagara CPU cluster

Plus some smaller ones

- Mist GPU cluster
- Rouge AMD GPU cluster
- Teach

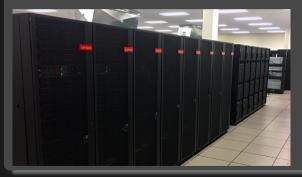

What does SciNet do?

Systems

We host one of the largest supercomputers in Canada available to academics.

• Niagara CPU cluster

Plus some smaller ones

- Mist GPU cluster
- Rouge AMD GPU cluster
- Teach

And a longer-term storage facility

• HPSS

What else does SciNet do?

Training

- Intro to SciNet and Niagara, Linux Shell
- Scientific and Parallel Programming (C, C++, Fortran, R, Python, CUDA)
- Grad Courses on Scientific Computing , Data Analysis, and BioStatistics
- Data management, Parallel I/O, Databases, Machine learning, AI
- Ontario HPC summer school
- International HPC summer school (together with PRACE, XSEDE, RIKEN)

Introduction to SciNet, Niagara & Mist

Niagara

Mike Nolta (SciNet)

Introduction to SciNet, Niagara & Mist

June 14, 2023 8 / 47

Niagara

- 80,960 x86-64 cores.
- 2,024 *Lenovo SD530* nodes
- Per node:
 - ► 40 Intel SkyLake/CascadeLake cores @ 2.4GHz
 - ▶ 188 GiB RAM
- 3.6 PFlops sustained (6.25 PFlops theoretical).
 #59 on the Nov 2018 TOP500* (now #177)
- InfiniBand Dragonfly+ network
 1:1 up to 432 nodes, 2:1 beyond that.
- Parallel shared file system for home, scratch, project
- Burst Buffer for fast I/O

Mist

9/47

Introduction to SciNet Niagara & Mist

Mist

- Niagara's little GPU sibling (Also a SOSCIP system.)
- 54 IBM Power-9 nodes with 4 GPUs.
- Per node:
 - ► 32 Power-9 cores @ 2.4GHz
 - ► 256 GB RAM per node
 - ► 4 NVIDIA "Volta" GPUs with 32GB
- 1 PFlops peak (1.6 PFlops theoretical).
- Interconnect: 1:1 InfiniBand Dragonfly+
- Same parallel shared file systems as Niagara

Using Niagara and Mist

Mike Nolta (SciNet)

Introduction to SciNet, Niagara & Mist

June 14, 2023 10 / 47

Access

Register with the Alliance CCDB

https://ccdb.computecanada.ca/account_application

Pls have to get an account one first, so they can sponsor your account at no cost.

The approval process typically takes 1-2 business days.

Access

Register with the Alliance CCDB

https://ccdb.computecanada.ca/account_application

Pls have to get an account one first, so they can sponsor your account at no cost.

The approval process typically takes 1-2 business days.

2 Go to

https://ccdb.computecanada.ca/services/opt_in

and click on the "Join" button next to Niagara and Mist.

Access

Register with the Alliance CCDB

https://ccdb.computecanada.ca/account_application

Pls have to get an account one first, so they can sponsor your account at no cost.

The approval process typically takes 1-2 business days.

2 Go to

nttps://ccdb.computecanada.ca/services/opt_in

and click on the "Join" button next to Niagara and Mist.

³ After a business day or two, you get an email confirming your access to Niagara and Mist.

Access: Secure Login

- As with all SciNet and Alliance systems, access is via ssh only.
- The connection will get you to a Linux command line interface.

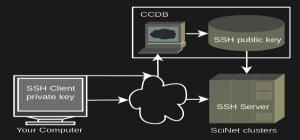

Access: Secure Login

- As with all SciNet and Alliance systems, access is via ssh only.
- The connection will get you to a Linux command line interface.
- Password doesn't work on Niagara and Mist! SSH keys must be used to authenticate.

Access: Secure Login

- As with all SciNet and Alliance systems, access is via ssh only.
- The connection will get you to a Linux command line interface.
- Password doesn't work on Niagara and Mist! SSH keys must be used to authenticate.
- SSH keys come in a pair:
 - a private key which is kept on your own computer and used to connect
 - a public key that you upload to CCDB and which then propagates to the clusters.
- You can and should protect your private key with a passphrase.

Note that you can use the same SSH keys for connecting to the other Alliance clusters as well.

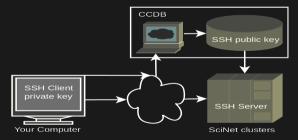

Access: SSH key setup for first login

- To access SciNet systems for the first time, open a local terminal window on your computer (e.g. MobaXTerm).
- Then generate a **ssh key pair** with the following command:

laptop> ssh-keygen -t ed25519 -C "USERNAME@MYLAPTOP dra" -f ~/.ssh/dra_ed25519

- That will prompt you to enter a passphrase to protect your private key.
 The passphrase does not leave your computer, it just 'unlocks' the key.
- A private key, dra_ed25519, and a public key, dra_ed25519.pub are then created in the directory ".ssh" in your home directory.
- -f option specifies the filename of the key file.

Access: SSH key setup for first login

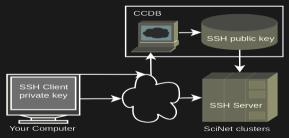

- To access SciNet systems for the first time, open a local terminal window on your computer (e.g. MobaXTerm).
- Then generate a **ssh key pair** with the following command:

laptop> ssh-keygen -t ed25519 -C "USERNAME@MYLAPTOP dra" -f ~/.ssh/dra_ed25519

- That will prompt you to enter a passphrase to protect your private key.
 The passphrase does not leave your computer, it just 'unlocks' the key.
- A private key, dra_ed25519, and a public key, dra_ed25519.pub are then created in the directory ".ssh" in your home directory.

• (optional) -C option allows you to insert a comment into the key.

Once you created your ssh key pair, you need to make Niagara/Mist aware of the public part of your key.

Once you created your ssh key pair, you need to make Niagara/Mist aware of the public part of your key.

• Step 1: Use your Alliance/CCDB credentials to visit the following site:

https://ccdb.computecanada.ca/ssh_authorized_keys

Once you created your ssh key pair, you need to make Niagara/Mist aware of the public part of your key.

• Step 1: Use your Alliance/CCDB credentials to visit the following site:

https://ccdb.computecanada.ca/ssh_authorized_keys

or via the CCDB menu:

• Step 2: Grab your SSH public key:

laptop> cat ~/.ssh/dra_ed25519.pub ssh-ed25519 AAAAC3NzaC11ZDI1NTE5AAAAIEpDf+Wcvtru6pUcBgJQo/3+cmI4+MisfNE3U46/CDkx USERNAME@MYLAPTOP dra

• Step 2: Grab your SSH public key:

```
laptop> cat ~/.ssh/dra_ed25519.pub
ssh-ed25519 AAAAC3NzaC11ZDI1NTE5AAAAIEpDf+Wcvtru6pUcBgJQo/3+cmI4+MisfNE3U46/CDkx
USERNAME@MYLAPTOP dra
```

• Step 3: Paste the public key into the CCDB form and click "Add Key" button:

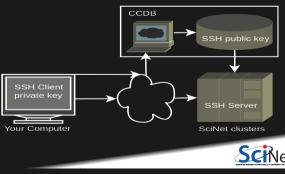

Access: Logging in

Wait a few minutes for your new uploaded public key to propagate to the systems and then ssh into the Niagara login nodes specifying the corresponding ssh private key:

laptop> ssh -Y -i ~/.ssh/dra_ed25519 USERNAME@niagara.scinet.utoronto.ca Enter passphrase for dra_ed25519: nia-login07:~\$

- The optional -Y is needed to open windows from the Niagara command-line onto your local X server.
- -i option selects a file from which the identity (private key) for key authentication is read.
- For *Mist*, replace *niagara* with *mist*.

Once you've logged in successfully, you can save the ssh options in ~/.ssh/config:

```
Host niagara
HostName niagara.scinet.utoronto.ca
User USERNAME
IdentityFile ~/.ssh/dra_ed25519
IdentitiesOnly yes
```

Once you've logged in successfully, you can save the ssh options in ~/.ssh/config:

```
Host niagara
HostName niagara.scinet.utoronto.ca
User USERNAME
IdentityFile ~/.ssh/dra_ed25519
IdentitiesOnly yes
```

Now you can access Niagara by simply typing (in addition to your passphrase):

laptop> ssh niagara

Once you've logged in successfully, you can save the ssh options in ~/.ssh/config:

```
Host niagara
HostName niagara.scinet.utoronto.ca
User USERNAME
IdentityFile ~/.ssh/dra_ed25519
IdentitiesOnly yes
```

Now you can access Niagara by simply typing (in addition to your passphrase): laptop> ssh niagara

This will also make data transfer commands like scp and rsync work more easily.

Once you've logged in successfully, you can save the ssh options in ~/.ssh/config:

```
Host niagara
HostName niagara.scinet.utoronto.ca
User USERNAME
IdentityFile ~/.ssh/dra_ed25519
IdentitiesOnly yes
```

Now you can access Niagara by simply typing (in addition to your passphrase): laptop> ssh niagara

This will also make data transfer commands like scp and rsync work more easily.

You can use the ssh-agent to hold your key for you by typing:

laptop> ssh-add ~/.ssh/dra_ed25519

This will ask for the passphrase, and then save that key so you do not have to type the passphrase again during the session.

• Do not share your private keys!

Mike Nolta (SciNet)

June 14, 2023 18 / 47

- Do not share your private keys!
- Always protect it with a strong passphrase!

- Do not share your private keys!
- Always protect it with a strong passphrase!
- Never copy your private key to other systems!

- Do not share your private keys!
- Always protect it with a strong passphrase!
- Never copy your private key to other systems!
- Create one key pair for each computer you use to access our systems.

- Do not share your private keys!
- Always protect it with a strong passphrase!
- Never copy your private key to other systems!
- Create one key pair for each computer you use to access our systems.
- Create one key pair for each different service, role or domain, and name them accordingly.

- Do not share your private keys!
- Always protect it with a strong passphrase!
- Never copy your private key to other systems!
- Create one key pair for each computer you use to access our systems.
- Create one key pair for each different service, role or domain, and name them accordingly.
- Do not create key pairs in shared systems like HPC clusters.

A reference to help you troubleshooting: https://docs.alliancecan.ca/wiki/SSH_Keys

 If you get a warning on your first ssh login as in "REMOTE HOST IDENTIFICATION HAS CHANGED". Please compare the ssh host key fingerprint listed with the ones at https://docs.alliancecan.ca/wiki/SSH_host_keys. Contact us if they don't match, type yes and accept it otherwise.

There are three types of nodes on Niagara:

There are three types of nodes on Niagara:

The *login nodes* are where you develop, edit, compile, prepare and submit jobs.

These login nodes are not part of the Niagara compute cluster, but have the same architecture, operating system, and software stack.

These nodes are shared, i.e., multiple users are on the same nodes.

These nodes have limits in terms of how long you can run and the memory your applications can use.

There are three types of nodes on Niagara:

The *login nodes* are where you develop, edit, compile, prepare and submit jobs.

These login nodes are not part of the Niagara compute cluster, but have the same architecture, operating system, and software stack.

These nodes are shared, i.e., multiple users are on the same nodes.

These nodes have limits in terms of how long you can run and the memory your applications can use.

To run on Niagara's *compute nodes*, you must submit a batch job.

In a job script, you can specify how many nodes you need and for how long. Once the job scheduler starts your job, it is the only thing running on its reserved nodes.

These login nodes are not part of the Niagara compute cluster, but have the same architecture, operating system, and software stack.

These nodes are shared, i.e., multiple users are on the same nodes.

These nodes have limits in terms of how long you can run and the memory your applications can use.

To run on Niagara's *compute nodes*, you must submit a batch job.

In a job script, you can specify how many nodes you need and for how long. Once the job scheduler starts your job, it is the only thing running on its reserved nodes.

For large data transfers, you can use the specialized data mover nodes.

All these nodes see the same shared file system.

Usage: Storage Systems and Locations

Home and scratch

You have a home and scratch directory on the shared file systems, whose locations are given by

\$HOME=/home/g/groupname/username

\$SCRATCH=/scratch/g/groupname/username

Use these convenient variables!

nia-login07:~\$ pwd /home/s/scinet/myusername

nia-login07:~\$ cd \$SCRATCH

nia-login07:myusername\$ pwd
/scratch/s/scinet/myusername

Usage: Storage Systems and Locations

Home and scratch

You have a home and scratch directory on the shared file systems, whose locations are given by

\$HOME=/home/g/groupname/username

\$SCRATCH=/scratch/g/groupname/username

Use these convenient variables!

nia-login07:~\$ pwd
/home/s/scinet/myusername

nia-login07:~\$ cd \$SCRATCH

nia-login07:myusername\$ pwd /scratch/s/scinet/myusername

Project

Users from groups with a RAC allocation will also have a project directory. \$PR0JECT=/project/g/groupname/username

Usage: Storage Systems and Locations

Home and scratch

You have a home and scratch directory on the shared file systems, whose locations are given by

\$HOME=/home/g/groupname/username

\$SCRATCH=/scratch/g/groupname/username

Use these convenient variables!

nia-login07:~\$ pwd
/home/s/scinet/myusername

nia-login07:~\$ cd \$SCRATCH

nia-login07:myusername\$ pwd /scratch/s/scinet/myusername

Project

Users from groups with a RAC allocation will also have a $\ensuremath{\mathsf{project}}$ directory.

\$PROJECT=/project/g/groupname/username

Burst Buffer

Groups with heavy I/O can request access to a smaller, faster parallel file system called burst buffer

\$BBUFFER=/bb/g/groupname/username

location	quota	#files	block size	expiration	backed up	on login	compute
\$HOME \$SCRATCH \$PROJECT	100 GB 25 TB by group allocation	250K 6M depends	1 MB 16 MB 16 MB	2 months	yes no yes	yes yes yes	read-only yes yes

- \$ARCHIVE space, also called nearline storage or HPSS, is not mounted on login or compute nodes.
- Storage space on project and HPSS is allocated through the annual Alliance RAC allocation competition.
- Backup means a recent snapshot, not an archive of all data that ever was.

Mike Nolta (SciNet)

Moving data

Move amounts less than 10GB through the login nodes

Use scp or rsync to and from niagara.scinet.utoronto.ca.

• For scp to use your ssh key, give it the '-i ~/.ssh/YOURKEY' option. E.g.

laptop> scp -i ~/.ssh/dra_ed25519 this USERNAME@niagara.scinet.utoronto.ca:that

- These commands must be given on your computer.
- For rsync to use your ssh key, give it the '-e "ssh -i ~/.ssh/YOURKEY"' option.
- This will time out for amounts larger than about 10GB.

Moving data

Move amounts less than 10GB through the login nodes

Use scp or rsync to and from niagara.scinet.utoronto.ca.

• For scp to use your ssh key, give it the '-i ~/.ssh/YOURKEY' option. E.g.

laptop> scp -i ~/.ssh/dra_ed25519 this USERNAME@niagara.scinet.utoronto.ca:that

- These commands must be given on your computer.
- For rsync to use your ssh key, give it the '-e "ssh -i ~/.ssh/YOURKEY"' option.
- This will time out for amounts larger than about 10GB.

Move amounts larger than 10GB through the datamover nodes.

- Use scp or rsync with nia-datamover1.scinet.utoronto.ca or nia-datamover2.scinet.utoronto.ca .
- If you do this often, consider using Globus, a web-based tool for data transfer.

Moving data

Move amounts less than 10GB through the login nodes

Use scp or rsync to and from niagara.scinet.utoronto.ca.

• For scp to use your ssh key, give it the '-i ~/.ssh/YOURKEY' option. E.g.

laptop> scp -i ~/.ssh/dra_ed25519 this USERNAME@niagara.scinet.utoronto.ca:that

- These commands must be given on your computer.
- For rsync to use your ssh key, give it the '-e "ssh -i ~/.ssh/YOURKEY"' option.
- This will time out for amounts larger than about 10GB.

Move amounts larger than 10GB through the datamover nodes.

- Use scp or rsync with nia-datamover1.scinet.utoronto.ca or nia-datamover2.scinet.utoronto.ca .
- If you do this often, consider using Globus, a web-based tool for data transfer.

Moving data to HPSS/Archive/Nearline.

- HPSS is a tape-based storage solution, and is SciNet's nearline a.k.a. archive facility.
- Store and recall using scheduled jobs or Globus.

Usage: Software and Libraries

Once you are on one of the login nodes, what software is already installed?

- Other than essentials, all installed software is made available using module commands.
- These set environment variables (PATH, etc.)
- Allows multiple, conflicting versions of a given package to be available.
- module spider shows the available software.

Usage: Software and Libraries

Once you are on one of the login nodes, what software is already installed?

- Other than essentials, all installed software is made available using module commands.
- These set environment variables (PATH, etc.)
- Allows multiple, conflicting versions of a given package to be available.
- module spider shows the available software.

```
nia-login07:~$ module spider
```

The following is a list of the modules..

CCEnv: CCEnv Compute Canada software modules. Mus modules in 'module spider'. NiaEnv: NiaEnv/2018a, NiaEnv/2019b Software modules for Niagara. Must b 'module spider' (loaded by default). antlr: antlr/2.7.7 ANTLR, ANother Tool for Language Rec language tool that provides a framew

Usage: Tips for loading modules

• We advise *against* loading modules in your .bashrc file.

This could lead to very confusing behaviour under certain circumstances.

- Instead, load modules by hand when needed, or by sourcing a separate script.
- Load run-specific modules inside your job submission script.
- Short names give default versions; e.g. intel \rightarrow intel/2019u4.

It is usually better to be explicit about the versions, for future reproducibility.

Can I Run Commercial Software?

- Possibly, but you have to bring your own license for it.
- SciNet and the Digital Research Alliance of Canada have an extremely large and broad user base of thousands of users, so we cannot provide licenses for everyone's favorite software.
- Thus, the only commercial software installed on Niagara is software that can benefit everyone: Vendor compilers (Intel, IBM) and parallel debuggers.
- That means no MATLAB, Gaussian, IDL, ...
- Open source alternatives like Octave, Python, R, Julia are available.
- We are happy to help you to install commercial software for which you have a license.
- In some cases, if you have a license, you can use software in the Alliance stack.

Usage: Python modules

- Several python versions are available as modules.
- These comes with optimized Numpy, SciPy,
- Further packages for Python and R are not installed in modules; These need to be installed in users' home directories.
- For installing packages for Python, use virtual environments:

Usage: Python modules

- Several python versions are available as modules.
- These comes with optimized Numpy, SciPy,
- Further packages for Python and R are not installed in modules; These need to be installed in users' home directories.
- For installing packages for Python, use virtual environments:

```
nia-login07:~$ module load python/3.9.8
nia-login07:~$ virtualenv --system-site-packages ~/myenv
nia-login07:~$ source ~/myenv/bin/activate
(myenv) nia-login07:~$ pip install THISPACKAGE
```

Usage: Python modules

- Several python versions are available as modules.

- Further packages for Python and R are not installed in modules; These need to be installed in users' home directories.
- For installing packages for Python, use virtual environments:

```
nia-login07:~$ module load python/3.9.8
nia-login07:~$ virtualenv --system-site-packages ~/myenv
nia-login07:~$ source ~/myenv/bin/activate
(myenv) nia-login07:~$ pip install THISPACKAGE
```

If you want, use the "venv2jup" command to use your virtual environment in the JupyterHub.

Usage: Python modules

- Several python versions are available as modules.
- These comes with optimized Numpy, SciPy,
- Further packages for Python and R are not installed in modules; These need to be installed in users' home directories.
- For installing packages for Python, use virtual environments:

```
nia-login07:~$ module load python/3.9.8
nia-login07:~$ virtualenv --system-site-packages ~/myenv
nia-login07:~$ source ~/myenv/bin/activate
(myenv) nia-login07:~$ pip install THISPACKAGE
```

If you want, use the "venv2jup" command to use your virtual environment in the JupyterHub. If at all possible, do not use conda environments.

Usage: R modules

• Several R versions are available as modules, but you first need to load a gcc module

```
$ module load gcc
$ module -r avail ^r/
------ /scinet/niagara/software/2019b/modules/gcc-8.3.0 ------
r/3.5.3 r/3.6.1 r/3.6.3 (D) r/4.0.3 r/4.1.2
$ module load r/4.1.2
```

Usage: R modules

• Several R versions are available as modules, but you first need to load a gcc module

```
$ module load gcc
$ module -r avail ^r/
------ /scinet/niagara/software/2019b/modules/gcc-8.3.0 ------
r/3.5.3 r/3.6.1 r/3.6.3 (D) r/4.0.3 r/4.1.2
$ module load r/4.1.2
```

• To install R packages, use the R command "install.packages(...)"

Usage: R modules

• Several R versions are available as modules, but you first need to load a gcc module

```
$ module load gcc
$ module -r avail ^r/
------ /scinet/niagara/software/2019b/modules/gcc-8.3.0 ------
r/3.5.3 r/3.6.1 r/3.6.3 (D) r/4.0.3 r/4.1.2
$ module load r/4.1.2
```

- To install R packages, use the R command "install.packages(...)"
- The first time you do this, you'll be asked if you are okay with installing in your home directory (hint: you are).

Suppose you have to compile your own C, C++ or Fortran code.

• Not a problem: Niagara has GNU compilers as well as Intel compilers installed in modules.

- Not a problem: Niagara has GNU compilers as well as Intel compilers installed in modules.
- Need an MPI library? Not a problem either: Niagara has openmpi and intelmpi libraries as modules.

- Not a problem: Niagara has GNU compilers as well as Intel compilers installed in modules.
- Need an MPI library? Not a problem either: Niagara has openmpi and intelmpi libraries as modules.
- We recommend that you use the intel compilers with openmpi libraries.

- Not a problem: Niagara has GNU compilers as well as Intel compilers installed in modules.
- Need an MPI library? Not a problem either: Niagara has openmpi and intelmpi libraries as modules.
- We recommend that you use the intel compilers with openmpi libraries.
- Use -march=native (gcc) or -xhost (intel) compilation flags to get the most out of Niagara's cpus.
- Need libraries? "module load" them.

Suppose you have to compile your own C, C++ or Fortran code.

- Not a problem: Niagara has GNU compilers as well as Intel compilers installed in modules.
- Need an MPI library? Not a problem either: Niagara has openmpi and intelmpi libraries as modules.
- We recommend that you use the intel compilers with openmpi libraries.
- Use -march=native (gcc) or -xhost (intel) compilation flags to get the most out of Niagara's cpus.
- Need libraries? "module load" them.

Example

```
nia-login07:~$ module load intel/2019u4 gsl/2.5
nia-login07:~$ ls
main.c module.c
nia-login07:~$ icc -c -03 -xHost -o main.o main.c
nia-login07:~$ icc -c -03 -xHost -o module.o module.c
nia-login07:~$ icc -o main module.o main.o -lgsl -mkl
```

Usage: Testing

• Small test jobs can be run on the login nodes.

Rule of thumb: couple of minutes, taking at most about 1-2GB of memory, couple of cores, \leq 1 gpu.

- You can run the the ddt debugger after module load ddt.
- The ddt module also gives you the map performance profiler.
- Short tests on Niagara that do not fit on a login node, or for which you need a dedicated node, request an interactive debug job with the debugjob command

nia-login07:~\$ debugjob N

where N is the number of nodes. The duration of your interactive debug session can be at most one hour, can use at most N=4 nodes, and each user can only have one such session at a time.

• For short single-gpu tests on Mist use

mist-login01:~\$ debugjob -g 1

Usage: Submitting jobs to the Compute Nodes

- Niagara and Mist use SLURM as the job scheduler.
- You submit jobs from a login node by passing a script to the sbatch command: nia-login07:~\$ sbatch jobscript.sh
- This puts the job in the queue. It will run on the compute nodes in due course.
- Jobs will run under their group's RRG allocation, or, if the group has none, under a RAS (or "default") allocation.

Usage: Submitting jobs to the Compute Nodes

- Niagara and Mist use SLURM as the job scheduler.
- You submit jobs from a login node by passing a script to the sbatch command: nia-login07:~\$ sbatch jobscript.sh
- This puts the job in the queue. It will run on the compute nodes in due course.
- Jobs will run under their group's RRG allocation, or, if the group has none, under a RAS (or "default") allocation.

Keep in mind:

Usage: Submitting jobs to the Compute Nodes

- Niagara and Mist use SLURM as the job scheduler.
- You submit jobs from a login node by passing a script to the sbatch command: nia-login07:~\$ sbatch jobscript.sh
- This puts the job in the queue. It will run on the compute nodes in due course.
- Jobs will run under their group's RRG allocation, or, if the group has none, under a RAS (or "default") allocation.

Keep in mind:

- Niagara scheduling is by node, so in multiples of 40-cores. Use all cores!
- Mist scheduling is by single gpu or by whole node (multiple of 4 gpus). Use all GPUs!
- Maximum walltime is 24 hours.
- Jobs must write to your scratch or project directory (home is read-only on compute nodes).
- Compute nodes have no internet access.

```
#!/bin/bash

Example submission script (MPI)

```
#!/bin/bash
#SBATCH --nodes=2
#SBATCH --ntasks-per-node=40
#SBATCH --time=3:00:00
#SBATCH --job-name mpi_job
#SBATCH --output=mpi_output_%j.txt
#SBATCH --mail-type=FAIL
module load NiaEnv/2019b
module load intel/2019u4
module load openmpi/4.0.1
```

mpirun ./mpi_app # or 'srun ./mpi_app'

nia-login07:scratch\$ sbatch mpi_job.sh

- First line indicates that this is a bash script.
- Lines starting with #SBATCH go to SLURM.
- sbatch reads these lines as a job request (which it gives the name mpi_job)
- In this case, SLURM looks for 2 nodes with 40 cores on which to run 80 tasks, for 3 hours.
- Submit from /scratch, so output can be written.
- Once it found nodes, the script is run:
 - Loads modules;
 - ► Runs the mpi_app application.

Once the job is in the queue, there are some commands you can use to monitor its progress:

• squeue --me to show your jobs in the queue (squeue for all jobs);

- squeue --me to show your jobs in the queue (squeue for all jobs);
- squeue -j JOBID or scontrol show job JOBID to get information on a specific job.

- squeue --me to show your jobs in the queue (squeue for all jobs);
- squeue -j JOBID or scontrol show job JOBID to get information on a specific job.
- squeue --start -j JOBID to get an estimate for when a job will run.

- squeue --me to show your jobs in the queue (squeue for all jobs);
- squeue -j JOBID or scontrol show job JOBID to get information on a specific job.
- squeue --start -j JOBID to get an estimate for when a job will run.
- jobperf JOBID to get an instantaneous view of the cpu+memory usage of a running job's nodes.

- squeue --me to show your jobs in the queue (squeue for all jobs);
- squeue -j JOBID or scontrol show job JOBID to get information on a specific job.
- squeue --start -j JOBID to get an estimate for when a job will run.
- jobperf JOBID to get an instantaneous view of the cpu+memory usage of a running job's nodes.
- scancel -i JOBID to cancel the job.

- squeue --me to show your jobs in the queue (squeue for all jobs);
- squeue -j JOBID or scontrol show job JOBID to get information on a specific job.
- squeue --start -j JOBID to get an estimate for when a job will run.
- jobperf JOBID to get an instantaneous view of the cpu+memory usage of a running job's nodes.
- scancel -i JOBID to cancel the job.
- scancel -u USERID to cancel all your jobs (careful!).

Usage: Hyperthreading

- Hyperthreading is a technology that leverages more of the physical hardware by pretending there are more logical cores than real ones.
- On Niagara, each physical core becomes 2 virtual cores, so nodes seem to have 80 cores.
- On Mist, each physical core becomes 4 virtual cores, so nodes appear to have 128 cores.

Usage: Hyperthreading

- Hyperthreading is a technology that leverages more of the physical hardware by pretending there are more logical cores than real ones.
- On Niagara, each physical core becomes 2 virtual cores, so nodes seem to have 80 cores.
- On Mist, each physical core becomes 4 virtual cores, so nodes appear to have 128 cores.

Using hyperthreading on Niagara

- First, ask for a certain number of nodes for your jobs and set --ntasks-per-node=40.
- This way you get to use all cores on the nodes, but without hyperthreading.
 (mpirun, srun, and the OS will automatically spread processes over the real cores)
- Then **test** if running 80xN MPI processes or threads gives you any speedup by setting --ntasks-per-node=80.

Even when doing so, your usage will be counted ("billing") as 40×N×(walltime in years).

Data Management

Mike Nolta (SciNet)

Introduction to SciNet, Niagara & Mist

June 14, 2023 45 / 47

• Your files can be seen on all Niagara login and compute nodes.

- Your files can be seen on all Niagara login and compute nodes.
- \$HOME, \$SCRATCH, and \$PROJECT all use the parallel file system called GPFS. GPFS is a high-performance file system which provides rapid reads and writes to large data sets in parallel from many nodes.

- \$HOME, \$SCRATCH, and \$PROJECT all use the parallel file system called GPFS. GPFS is a high-performance file system which provides rapid reads and writes to large data sets in parallel from many nodes.
- Accessing data sets which consist of many, small files leads to poor performance.
- Many small files on the system would waste space and would be slower to access, read and write.
- So avoid reading and writing lots of small amounts of data to disk.

- So avoid reading and writing lots of small amounts of data to disk.
- Write data out in binary. Faster and takes less space.

- So avoid reading and writing lots of small amounts of data to disk.
- Write data out in binary. Faster and takes less space.
- Burst buffer is better for I/O heavy jobs and to speed up checkpoints.

Either (1) ask support@scinet.utoronto.ca for persistent burst buffer space or (2) use the temporary \$BB JOB DIR.

• Even better, when it fits is to use **\$SLURM_TMPDIR**, which lives in memory.

Mike Nolta (SciNet)
